Advantages of Reading

As an intellectual object, a publication is prototypically a composition of these great length that it requires a considerable investment of time to write and a still considerable, though not so comprehensive, investment time to read. This feeling of book has a restricted and an unrestricted sense. In the restricted sense, a publication is a self explanatory section or portion of a longer article, a use that reflects the simple fact that, in antiquity, long works had to be written on several scrolls, and every scroll had to be identified by the book it contained. Therefore, for instance, each part of Aristotles Physics is called a book. In the unrestricted sense, a book is the compositional whole of that these sections, whether known as books or chapters or parts, are parts.

The intellectual content in a tangible publication does not need to be a makeup, nor even be called a novel. Books can consist only of drawings, engravings, or photos, or such matters as crossword puzzles or cut-out dolls. At a physical book, the pages can be left blank or can contain an abstract group of outlines as support for continuing entrances, e.g., an account book, an appointment book, an autograph book, a notebook, a diary, or a sketchbook. Some bodily publications are made out of pages thick and sturdy enough to support other physical objects, like a scrapbook or photograph album. Books may be distributed in electronic form as e-books along with other formats.

Although in normal academic parlance a monograph is known to be a professional academic work, rather than a reference work on a single scholarly subject, in library and information science monograph describes more broadly any non-serial publication complete in one volume (book) or a finite number of volumes (even a publication like Prousts seven-volume *In Search of Lost Time*), in contrast to serial publications like a magazine, journal, or newspaper. Novels are also sold everywhere. Google has estimated that as of 2010, approximately 130,000,000 different titles had been released. In some wealthier nations, the sale of published books has diminished due to the increased use of e-books.

In the 2000s, due to the rise in availability of affordable handheld computing devices, the chance to share texts through digital means became an attractive option for media publishers. Hence, the "e-book" was made. The term e-book is a contraction of "digital book"; it refers to some book-length publication in electronic form. An e-book is usually made available through the internet, but also on CD-ROM and other forms. E-Books may be read either using a computing device with an LED screen such as a traditional computer, a smartphone or a tablet computer; or by way of a mobile e-ink screen device called an e-book reader, like the Sony Reader, Barnes & Noble Nook, Kobo eReader, or the Amazon Kindle. E-book readers try to mimic the experience of reading a print book by using this technology, since the screens on e-book readers are much less reflective.
