## Benefits of Reading

As an intellectual thing, a book is prototypically a composition of these great length that it takes a substantial investment of time to compose and a still significant, though not so extensive, investment of time to browse. This sense of publication has a restricted and an unrestricted sense. In the restricted sense, a book is a self-sufficient section or part of a longer article, a use that reflects the fact that, in antiquity, long works needed to be written on many scrolls, and each scroll had to be identified by the publication it included. Therefore, for instance, each part of Aristotles Physics is referred to as a book. In the unrestricted sense, a publication is the compositional whole of that such segments, whether called books or chapters or components, are components.

The intellectual content in a tangible book need not be a composition, nor be called a book. Novels can consist only of drawings, engravings, or photos, or such things as crossword puzzles or cut-out dolls. At a physical book, the pages may be left blank or may contain an abstract group of lines as service for continuing entrances, e.g., an account book, an appointment book, an autograph book, a notebook, a diary, or a sketchbook. Some bodily books are created with pages thick and sturdy enough to support other physical objects, like a scrapbook or picture album. Books could be distributed in electronic form as e-books and other formats.

Although in normal academic parlance a monograph is known to be a specialist academic work, instead of a reference work on a single scholarly subject, in library and information science monograph denotes more broadly any non-serial book complete in 1 volume (publication ) or a finite number of volumes (even a novel like Prousts seven-volume In Search of Lost Time), in contrast to sequential books like a magazine, journal, or newspaper. Books are also sold everywhere. Books can also be borrowed from libraries. Google has estimated that as of 2010, approximately 130,000,000 different titles had been released. In some wealthier countries, the sale of published books has decreased due to the increased use of e-books.

In the 2000s, due to the growth in availability of affordable handheld computing devices, the chance to share texts through digital means became an appealing option for media publishers. Hence, the "e-book" was made. The term e-book is a contraction of "electronic book"; it refers to some book-length book in electronic form. An e-book is usually made available through the internet, but also on CD-ROM and other forms. E-Books may be read either using a computing device with an LED screen such as a traditional computer, a smartphone or a tablet computer; or by means of a portable e-ink screen device called an e-book reader, like the Sony Reader, Barnes & Noble Nook, Kobo eReader, or the Amazon Kindle. E-book readers attempt to mimic the experience of reading a print book by employing this technology, since the displays on e-book readers are much less reflective.
